The Response to Restriction Requirement received 5/5/2003, paper #16, has been entered and it is presumed that the new claims 43-46 submitted are intended to be entered. Claims 43-46 are elected with traverse and are considered here. The traversal is on the ground(s) that Group II is closely related to elected Group IV. This is not found persuasive because the Groups are distinct as set forth in the restriction requirement.

The requirement is still deemed proper and is therefore made FINAL.

Claims 43-46 are rejected under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Each of the following applies in all occurrences.

A search reveals the compounds of claims 43-46 are novel as claimed. However, the examples provided, such as in Fig. 1I and #4 on page 10 of the specification, are inconsistent with the claims which do not allow for a methoxy substitution or a substituent on the phosphate as shown. These structures have not been searched or considered here because they are not claimed.

Independent claims 43 and 44 should properly begin with an indefinite article.

The title of the invention is not aptly descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The Abstract of the Disclosure is objected to because it is too long, two paragraphs, and not directed to the elected invention. Correction is required. See M.P.E.P. § 608.01(b).

The disclosure is objected to because of the following informalities:

On page 19 and other instances the structure is not shown in the specification, appropriate correction is required. Please confirm the specification is complete and inform the examiner where support is found in the specification as originally filed for all the features in new claims 43-46. No new matter may be added.

The following prior art pertinent to applicant's disclosure is made of record and not relied upon:

Jiang (WO 01/09372 A1) is a related case.

Corey (4,810,636) teaches acridinone enzyme substrates.

Singh (6,002,000) teaches chemiluminescent compounds.

Akhavan-Tafti (5,772,926) teaches acridinium analogue substrates.

Law (4,745,181, 5,656,426) teaches acridinium analogue

25 substrates.
